Clear thinking.
Working software.

Distinctive websites and useful business applications, with Arabic interfaces and evidence you can inspect.

06

Original studio projects

2026

Year founded

EN / FR / AR

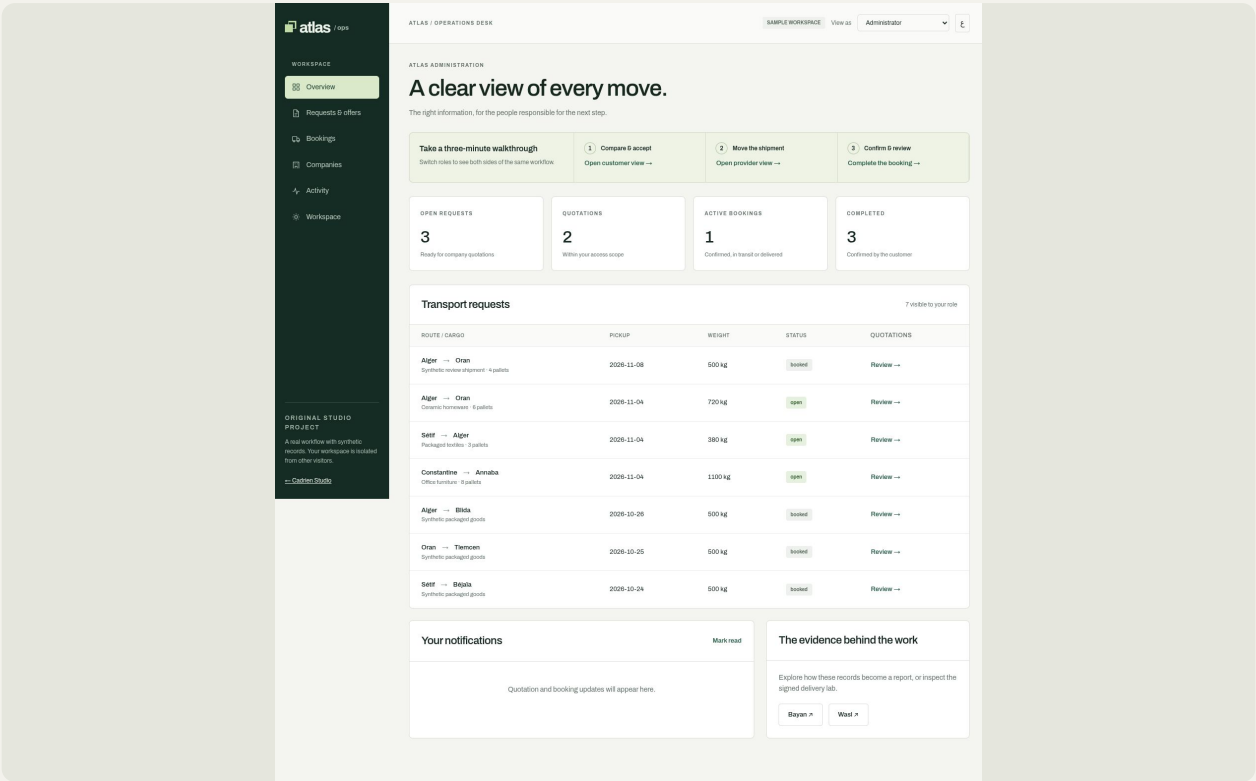

Portfolio languages

Independent work with synthetic data. These projects demonstrate implemented capabilities; they are not client commissions or a claim of long-term production operation.

FLAGSHIP / BUSINESS OPERATIONS

Atlas Operations

The whole journey, with accountable steps.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

A shared workflow for a customer, transport companies and an administrator. Request transport, compare private quotations, accept one offer, confirm delivery and record a review.

IMPLEMENTED

API-enforced roles and workspace boundaries; atomic booking acceptance; explicit state transitions; private PDF/text storage; notifications and audit records.

OBSERVED IN REVIEW

Browser review completed a new 24,000 DZD booking through quotation, delivery, customer confirmation and a five-star sample review. The data survived a server restart.

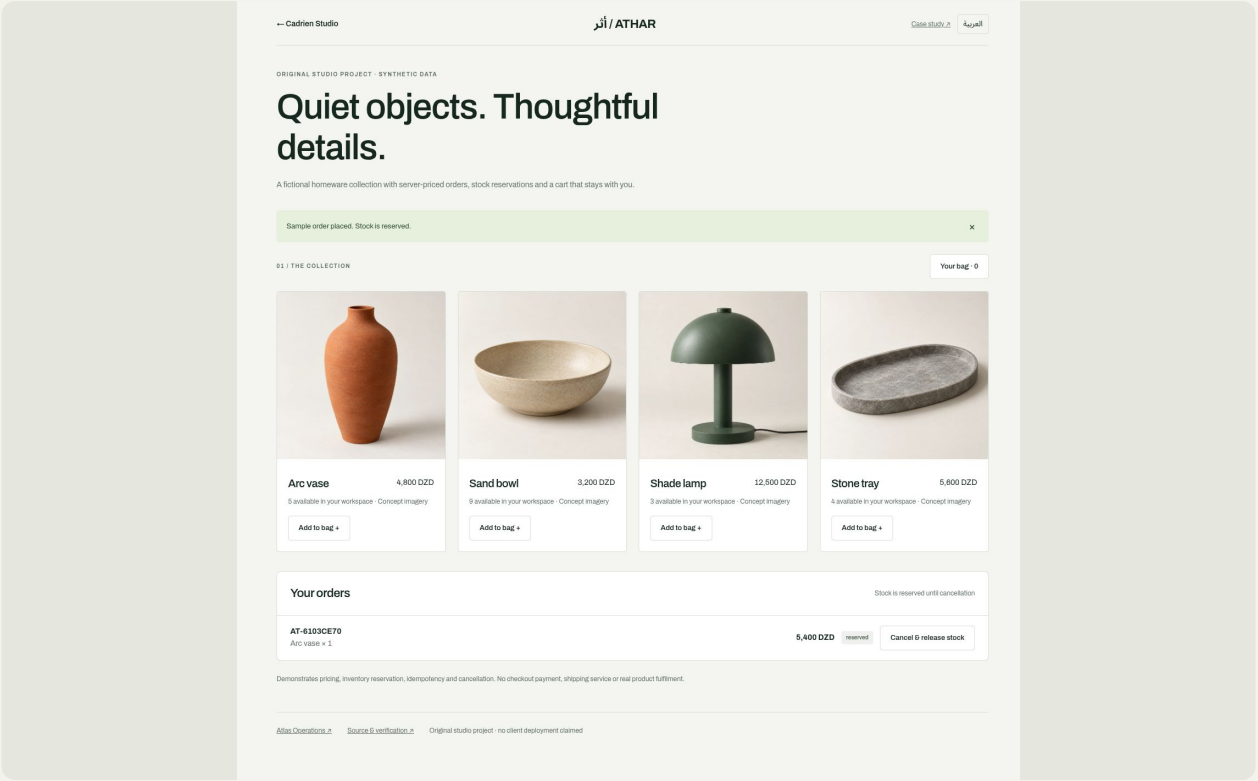

Open live demonstration >

Synthetic organisations and freight. No real transport, payments or outgoing email. Private files have validation but no malware scanner. Hosted identity requires the trusted platform boundary.

COMMERCE / INVENTORY

Athar

Quiet objects. Substantial order logic.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

A fictional homeware collection with a persistent cart, server-calculated prices, order history and stock reservation. A considered interface supported by transactional behaviour.

IMPLEMENTED

The API owns totals. Orders and inventory commit together. Repeated submissions return the same order; cancellation releases stock once.

OBSERVED IN REVIEW

Browser review placed a 5,400 DZD sample order. Stock moved from six to five; cancellation returned it to six. Service tests cover duplicates, price tampering and insufficient stock.

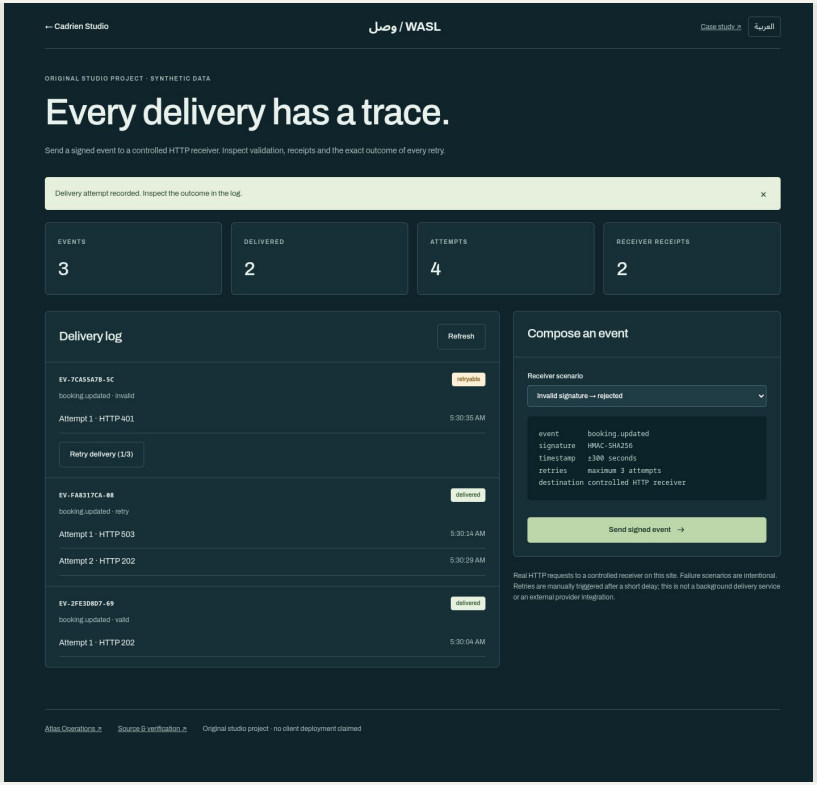

Open live demonstration >

Concept product imagery and synthetic inventory. No payment gateway, address collection, real shipping or product fulfilment.

INTEGRATIONS / SIGNED EVENTS

Wasl

Every delivery leaves a trace.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

A focused delivery console for signed events. See the receiver response, durable attempt history and receipts, including intentionally failing scenarios.

IMPLEMENTED

HMAC-SHA256 signatures and timestamp validation; same-origin HTTP receiver; deduplication; persisted attempts; bounded manual retries and interrupted-attempt recovery.

OBSERVED IN REVIEW

Browser review observed HTTP 202 acceptance, HTTP 503 followed by a successful retry, and HTTP 401 for an invalid signature without an extra receipt.

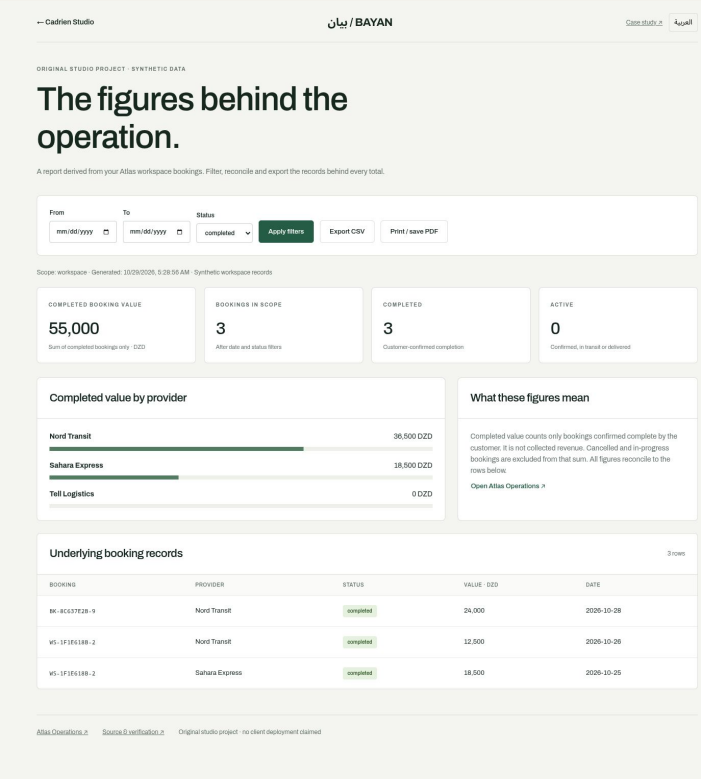

Open live demonstration >

The receiver is controlled by this application. Retries require user action, with a maximum of three attempts. No external provider integration or unattended queue is claimed.

REPORTING / OPERATIONAL DATA

Bayan

Figures you can reconcile.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

An operational report reading the same Atlas booking records. Filter dates and status, compare provider totals and inspect the records behind each figure.

IMPLEMENTED

Company-scoped visibility; consistent filters for rows and totals; CSV generation; browser print styling; English and Arabic interfaces.

OBSERVED IN REVIEW

The new Atlas booking raised completed value to 55,000 DZD: 24,000 + 12,500 + 18,500. Provider totals reconciled to 36,500 and 18,500. Completed filtering returned three rows.

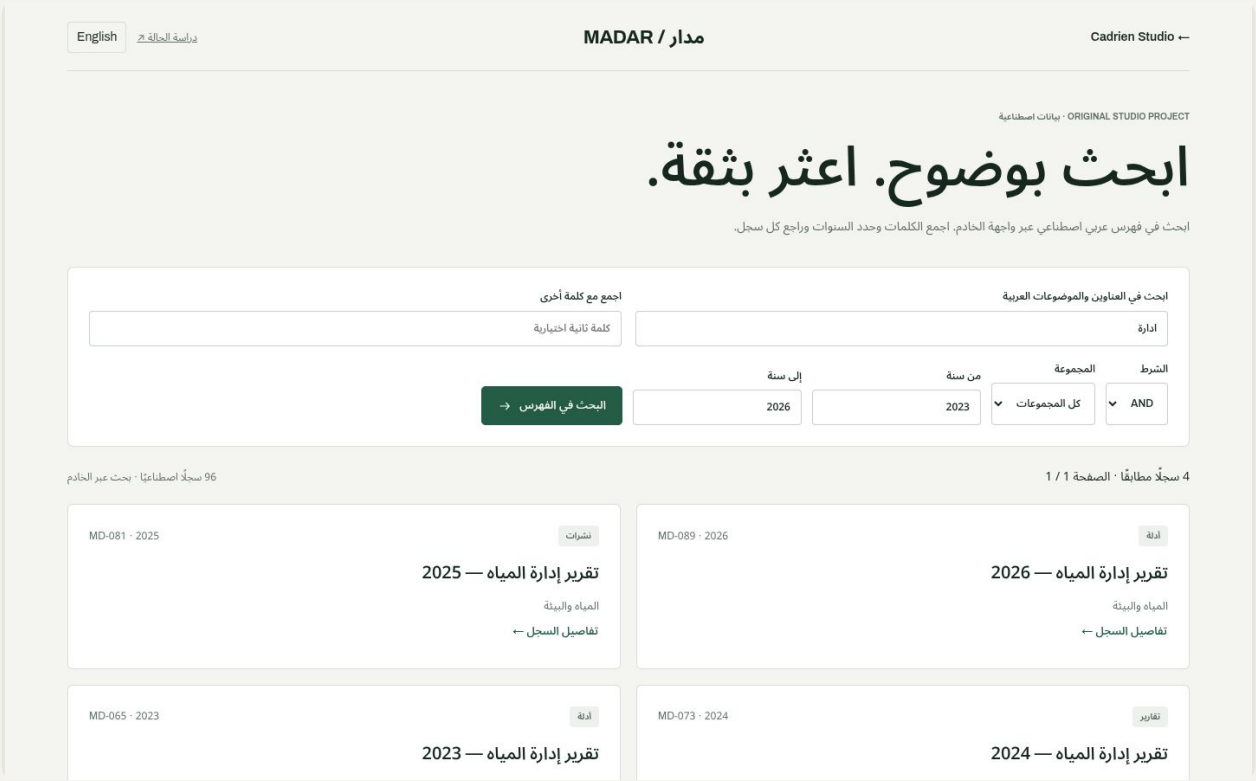

Open live demonstration >

Completed booking value is not collected revenue. CSV download was blocked by the review browser permission gate; browser export and print-to-PDF remain unverified.

ARABIC RTL / SEARCH

Madar

Arabic search, from query to record.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

An Arabic catalogue with purposeful search controls, year and collection filters, combined conditions, result counts, pagination and record details.

IMPLEMENTED

Ninety-six synthetic records stored in D1; parameterized SQL; normalization of Arabic diacritics and Alef variants; AND, OR and NOT combinations.

OBSERVED IN REVIEW

Browser review found twelve records using an alternate Alef form, then four with a 2023-onward filter. Record details, modal keyboard focus and the mobile Arabic layout were checked.

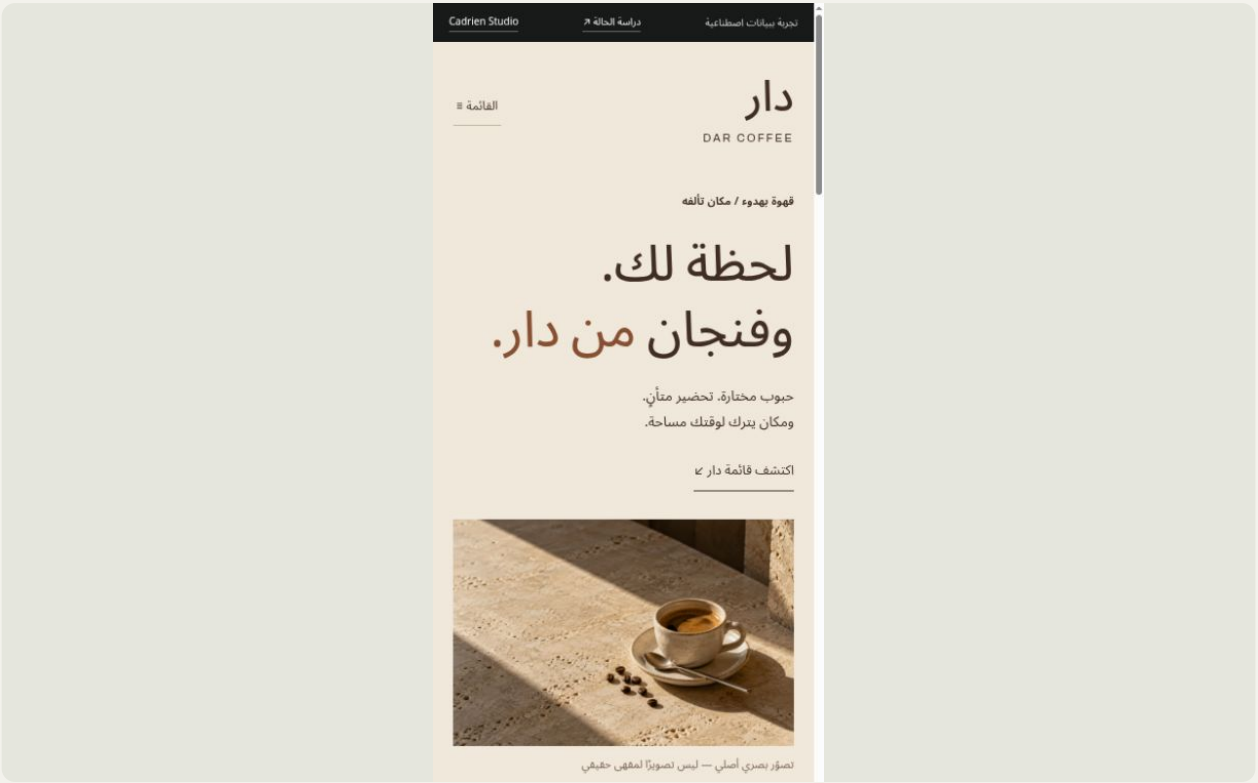

Open live demonstration >

Descriptive synthetic records only. No source document downloads, OCR, semantic search, archive ingestion or production collection is represented.

BRAND WEBSITE / ARABIC FIRST

Dar Coffee

A familiar ritual. A distinct presence.

ACTUAL LOCAL APPLICATION CAPTURE / SYNTHETIC CONTENT

A warm, editorial website for a fictional cafe. Arabic typography, a quiet material palette and an original concept image create a coherent identity across screen sizes.

IMPLEMENTED

Responsive HTML, CSS and JavaScript; a filterable menu; accessible navigation; FAQ disclosures; a local enquiry draft with explicit delivery status.

OBSERVED IN REVIEW

Browser review filtered the menu to two cold drinks and built a synthetic enquiry draft. The page confirmed that nothing was sent and no booking was created.

Open live demonstration >

Fictional venue, address, menu and hours. The coffee image is generated concept imagery. The enquiry stays in the page; no reservation or message is transmitted.

INSPECT / DISCUSS / BUILD

Evidence before promises.

A reviewable foundation for the next conversation.

Executable checks

24 service tests and TypeScript passed during review. The report records test names, time and a source fingerprint. Service tests run against SQLite; they do not prove long-term reliability.

Browser review

Core workflows, Arabic layouts and mobile widths were exercised. Dialog focus, Escape and return focus were checked. Browser file upload and download were denied by the review environment.

Operational boundaries

Synthetic data only. Guest access lasts 7 days, saved access 30 days and sessions 24 hours. Expiry does not automatically delete records. No penetration-test, backup-restore or load-test claim.
